

# 1 in 23 African American men die from prostate cancer.

**Screening may save your life.**

**Talk to your doctor.**

African American men are 2.3 times more likely to die from prostate cancer than any other racial group. However, if prostate cancer is detected early, the survival rate is excellent regardless of race or ethnicity. If you are an African American man over the age of 45, visit your doctor and ask about prostate screening options.
